Dear Mr. Hedberg,

This morning I spoke with Doug Jensen about the TCLP test that the Division is requiring on the fly ash that we have proposed to use in our reclamation plan. My first question to Doug was, "What the heck is a TCLP test?" Now that I know what it is that we need to do I have contacted America West Analytical Labs in Salt Lake City to complete the testing. I have made arraignments to have the samples taken to them tomorrow (November 13). It will take them 10 days to do the test and get the results back to me.

When I receive the test results I will send the re-worked amendment to our Large Mine Plan back to you for your consideration.

I appreciate the help that your office has given ZCMC in this matter,

Stan Wagner  
Mine Superintendent**RECEIVED**
